

AMENDMENT(S) TO THE CLAIMS

RECEIVED  
TECHNOLOGY CENTER 2800  
MAY -6 2003

1. (currently amended) An underfloor receptacle box system, comprising:  
an electrical cable connector;  
a mating power connector;  
a housing having a plurality of openings including a first opening and a second opening;  
a lid detachably attached to said housing substantially closing said first opening;  
at-least one pass-through connector, at least one said pass-through connector being at least partially disposed in said second opening, at least one said pass-through connector being configured to receive an connected to said electrical cable/connector cable connector on the inside of said housing and a to said mating power connector on the outside of said housing; and  
an insert having at least one angled wall, said insert being removably connected to said housing, said insert having a continuous wireway between said at least one angled wall and said housing.

2. (currently amended) The receptacle box system of claim 1, further comprising at least one of an electrical power receptacle, a telecommunication receptacle and a data receptacle connected to said insert.

3. (currently amended) The receptacle box system of claim 2, wherein said electrical power receptacle is electrically connected to said electrical cable connector includes an electrical cable connected to said electrical power receptacle and an electrical connector connected to said electrical cable, said electrical connector configured to mate with at least one said pass-through connector.

4. (currently amended) The ~~receptacle box system~~ of claim 3, further comprising a power connector configured to detachably connect to said pass-through connector.

5. (currently amended) The ~~receptacle box system~~ of claim 1, wherein said housing has at least one additional opening configured for the passage into said housing of at least one of electrical power, telecommunications and data.

6. (currently amended) The ~~receptacle box system~~ of claim 1, wherein said lid has at least one slot along at least one edge, said at least one slot providing for the passage of electrical interconnections into said housing.

7. (currently amended) The ~~receptacle box system~~ of claim 6, wherein said lid includes a bezel that is detachably connected to said housing, said lid hingeably connected to said bezel, said bezel having at least one retaining hook which coacts with said at least one slot thereby retaining electrical conductors.

8. (currently amended) The ~~receptacle box system~~ of claim 7, wherein said housing portion is configured to be mounted below a finished floor level, said bezel being substantially at said finished floor level and connected to said housing.

9. (currently amended) The ~~receptacle box system~~ of claim 1, wherein said at least one angled wall of said insert is two angled walls and said insert includes a bottom attached between said two angled walls, said wireway continuous between said bottom and said housing.

10. (currently amended) A method of reconfiguring an underfloor receptacle box, comprising the steps of:

removing a mounting assembly from the underfloor receptacle box; disconnecting an electrical ~~cable/connector~~ cable connector from a pass-through connector, said pass-through connector being ~~configured to receive connected to~~ connected to said electrical ~~cable/connector~~ cable connector on the inside of the underfloor receptacle box and a mating power connector on the outside of the underfloor receptacle box; and installing a pre-configured mounting assembly into the underfloor receptacle box.

*CJW*

11. (currently amended) The method of claim 10, wherein said removing step includes the steps of:

detaching said mounting assembly from a housing of the underfloor receptacle box; and unplugging at least one of said electrical ~~cable/connector~~ cable connector, a data connector and a telephone connector.

12. (original) The method of claim 11, wherein said installing step includes the sub-steps of:

connecting at least one of said electrical connector, said data connector and said telephone connector to said mounting assembly; and attaching said mounting assembly to said housing.

13. (original) The method of claim 10, further comprising the step of removing a bezel with a hingedly attached lid.

*C  
C  
C/P*

14. (original) The method of claim 10, further comprising the steps of:  
removing at least one receptacle from said mounting assembly; and  
attaching at least one receptacle to said mounting assembly.

15. (currently amended) The receptacle box of claim 1, wherein ~~at least one~~ said ~~pass-~~  
~~through~~ mating connector is connected to one of a source of electrical power, a source of data and  
a source of telecommunications.
